

Vendor Neutral Archive - a single view of the complete patient record

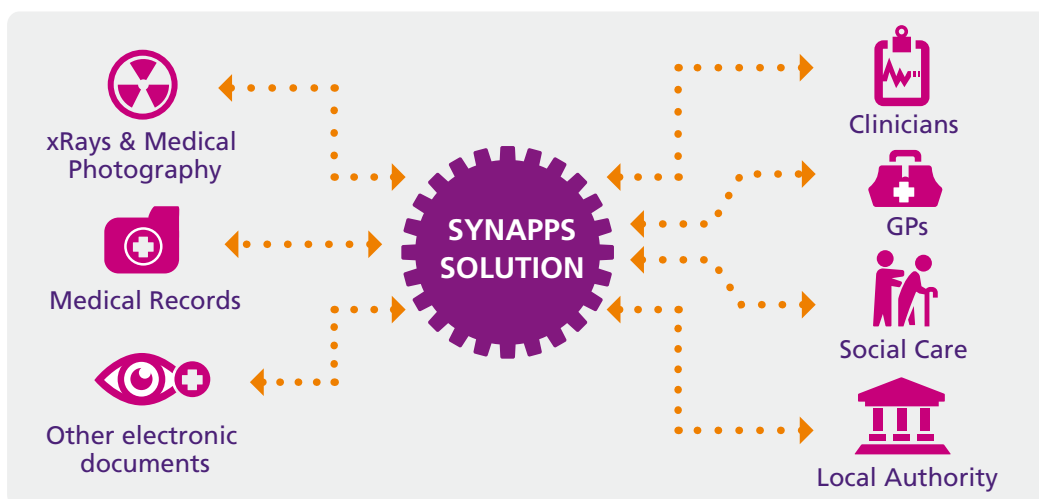

A vendor neutral archive (VNA) is a technology that stores medical images, patient records and all other content in a standard format and interface, making them accessible to healthcare professionals

Restricting hospital archiving systems to a single application, or a certain type of content, is at odds with initiatives to improve patient care and increase productivity via digital innovation. And it could mean Trusts end up spending more than they need to - on different systems for different uses.

SynApps' Vendor Neutral Archive is much more flexible than that. That's because it's been built on an open, standards-based enterprise content management platform, so it can be used to securely store and organise all kinds of content – not just medical images. It can be integrated with any number of different applications and data sources too, including electronic patient records (EPRs).

As well as delivering greater value, clinicians benefit from a single point of access to patients' complete records, improving productivity and enhancing patient care.

SynApps Vendor Neutral Archive: key features & benefits

- **An open, standards-based digital content management solution** catering for the full spectrum of data and data types - including pathology test results, medical images, referral notes, social care records and more.
- **A platform that's vendor and application agnostic.** Although we refer to it as a Vendor Neutral Archive, our solution is really a comprehensive application-independent clinical archive (AICA) – offering Trusts greater scope in how they use it.
- Unlike other VNAs, ours is **built on an enterprise content management (ECM)** platform as the core repository, offering superior scalability, availability and maturity.
- **A vision that transcends single-use content management.** SynApps' deep experience in integrated ECM across multiple industry sectors means we're well positioned to help Trusts embrace a more collaborative future, in line with plans for integrated health and social care.
- **Improved productivity, reduced risk.** A single, central hub for managing and viewing all care related information and records means less time wasted tracking down information, and more holistic care for patients - with less chance of something being overlooked.
- **Greater cost efficiency.** A non-restrictive, non-proprietary content platform removes the need for multiple systems - for different departments, or managing different types of data.
- **Compliance.** SynApps Vendor Neutral Archive supports all of the required standards, such as the CDA standard for clinical document exchange, and integration with Fast Healthcare Interoperability Resources (FHIR). It also complies with strict security requirements: SynApps is both ISO 27001 and Cyber Essentials certified.
- **Auditing & reporting.** Configurable dashboards show activity at a glance, and reports can be easily configured to show desired metrics.
- **Rapid, flexible and affordable deployment – at any scale.** Options to run SynApps Vendor Neutral Archive on local premises, in the cloud or something in between, offers Trusts flexible and affordable sourcing options.

About SynApps

SynApps Solutions is a widely respected independent expert in enterprise content management. We provide highly integrated solutions and services of exceptional quality, thanks to the deep skills and experience we have amassed over the last two decades.

Our customers, which span healthcare, government and commercial markets, are able to capture, manage and share knowledge dynamically and efficiently, with proven business and regulatory compliance benefits.

We provide software, consultancy, implementation and support services for leading ECM solutions, as well as our own content integration and migration solutions, ConXApps, which allow organisations to quickly maximise their investment in ECM technologies.
